Drydocks World expands Dubai yard

Drydocks World Dubai has significantly increased its conversion capacity after adding two new berths to its facility.

Each new berth is more than 59 metres wide and is projected to increase Drydocks World Dubai's floating production, storage and offloading capacity by two vessels per year.

The company said that completion of berths nine and 10 enable the shipyard to provide more lay-down and fabrication areas for the conversion of Very Large Crude Carriers (VLCCs) to FPSOs
